

Biodiversity modelling reveals a significant gap between diversity hotspots and protected areas for Iranian reptiles

Sajad Noori, Oliver Hawlitschek, Jens Oldeland, Hossein Rajaei, Martin Husemann & Marianna Simões

Supplementary Information: Table S1

Table S1. Location of the detected hotspots of reptile diversity (HRDs) in the current study, Hosseinzadeh et al. (2014), and Kafash et al. (2020). In our study we detected seven HRDs, from which three of them had been suggested by the other studies.

High diverse areas	Hosseinzadeh et al. 2014	Kafash et al. 2020	This study
Zagros Mountains: Western slopes of Zagros mountain in the west and southwest of Iran	Southwest of Iran in Khuzestan Plain	Western Zagros Mountains	HRD A
Zagros Mountains: Central Zagros and the north of the Persian Gulf	-	-	HRD B
Alborz Mountains: Central Alborz, North west and North of Central Plateau	-	North eastern and north western of Central Iranian Plateau	HRD C
Alborz Mountains: North east of Iran, eastern of the Alborz Mountains	-	-	HRD D
Khorasan Jonobi Province: East of Iran on the border with Afghanistan	-	-	HRD E
Sistan and Baluchistan Province: North east of the Sistan and Baluchistan Province on the borders with Afghanistan and Pakistan	East of Iran	-	HRD F
Sistan and Baluchistan Province: Sothern regions, North of the Oman Sea, along with Makran Mountains	East of Iran		HRD G
Azerbaijan: Northwest of Iran	North and Northwest of Iran	-	-
